

Gully Pot Kerbside Inlet Design for a Tree Pit Made With Structural Soils

The precast gully pots are supplied by Marshalls CPM. All of the materials required should be available from a local builder's merchant. Standard construction equipment can be used for handling and compacting the structural soil.

The gully pot inlet should be installed in conjunction with an aeration well (STP-03) installed in the paved surface that has pathways for air to reach the aeration layer.

Class D400 hinged gully grating and frame to BS EN124 in ductile or cast iron to be set 7mm below level of adjacent channels.

Gully cover slab (60mm or 100mm thick)

PAVED SURFACE
